About the NRIN

Netherlands Research Integrity Network

- Chair: Prof. dr. Lex Bouter
- Coordinator: dr. Fenneke Blom

Workgroup of RI professionals received funding from the Netherlands Organisation for Health Research and Development (ZonMw)

The NRIN aims

- Collaboration, exchange and mutual learning
- Information supply
- Training and education for different audiences
- Development and exchange of teaching materials and best practices
- Enabling of consultation and intervision
- Providing solicited and unsolicited advice

In this presentation

- About the NRIN
- **NRIN activities**
- NRIN newsletter and website
- Future plans

NRIN activities

Meetings:

- Discussion meetings for confidential counsellors
- Discussion meetings for committee chairs
- Seminar on education about RI
- Research conference

NRIN activities

Training RI:

- Training on RI for PhD-students
- RI workshop at research conference
- Lectures and workshops for research departments

NRIN activities

Other activities:

- Gathering and sharing information
- Research projects with students/interns
 - Honorary authorship
 - RI in fiction movies

Research Integrity: an interdisciplinary

A view from the side-line - by Henner

Newsletter nr 1 – June 2015

Netherlands Research Integrity Network

To read this newsletter online, click [here](#) or copy and paste this url into your web browser: www.nrn.nl/newsletter1

In this newsletter:

- Foreword
- World Conference on Research Integrity
- Research Integrity Congress Erasmus MC
- News:
 - New journal: Research Integrity and Peer Review
 - Horizon 2020 subsidy for RI research
- Highlights:
 - New publication on the ORI project
 - Recent commentaries about RI
 - Research article: Plagiarism in South African management journals
 - News on the website
 - Upping events

Our Flemish colleague Simon Godecharre writes in his reflection on the conference, no single initiative is going to change the research culture, we have to connect to contribute to a better system and culture. And that also underlines that the ORI is not just for the Dutch or people in the Netherlands: several international contributions to this newsletter were made, and about 15% of our members signed up from abroad. Let's continue to grow both nationally and internationally, and exchange, collaborate and learn together in order to contribute – each from our own diverse position or background – to our shared goal to improve the research culture.

Foreword – by Fenneke Bollen

We are very pleased to send you the first newsletter of the NRIN to our newsletters you will find relevant news, upcoming events and reflections on recent developments, highlights of research, books and more.

In this first newsletter we look back at the 4th World Conference on Research Integrity, together with some colleagues, it was a great conference, and a boost to the motivation for this network. As

The 4th World Conference on Research Integrity, May 31st-June 3rd

From May 31st to June 3rd the fourth World Conference on Research Integrity (WORI) took place in Rio de Janeiro. Previous editions were in Lisbon (2007), Singapore (2012) and Montreal (2015). And we are delighted to announce that the 5th WORI will be organized in Amsterdam 30-31 May 28-31 2017 in your agency.

In this newsletter we share some reflections on the 4th WORI. Read more about the conference on our website, such as a contribution by Jander van den Broek (who won one of the awards for most promising research projects in the Distal Forum), Jean Tighe's expectations and worries in 'most adults must submit scientific' links to other sources and the slides of the presentation about the NRIN.

very helpful if you need positive results. The resulting publication bias, selective reporting and selective citation will distort the validity of the published record and can explain the enormous replication difficulties that many disciplines experience.

It's encouraging that the need to take action with a view to improve this situation is increasingly recognized by the relevant stakeholders. An important and promising example is the LANCE REWARD campaign of which NRIN was one of the early adopters. See below for some more details on this campaign. The reproducibility crisis and a plea to take action was also the focus of recent visits of Science and Nature, as described in this Newsletter. That selective non-reporting of serious side effects can have devastating consequences was again made clear in the recent BMJ case mentioned below.

Foreword – by Leo Bouder

Research misbehavior is often associated with the three 'deadly sins' of fabrication, falsification and plagiarism. But on the aggregated level questionable research practices (QRPs) do probably much more harm, first and foremost in the form of selective publication. It has been shown that positive results are published more easily and cited more often. That will almost certainly improve your chances to get the next grant and eventually tenure. In many disciplines the proportion of papers reporting positive results has increased over time. A number of QRPs can be

The launch of the Reduce Research Waste and Reward Diligence (REWARD) Campaign at the Research Waste/EQUATOR conference

At the Research Waste/EQUATOR conference the LANCE Reduce Research Waste and Reward Diligence (REWARD) campaign was launched. The conference (Edinburgh, September 28-30th, 2015) aimed to present what was done so far with the 17 recommendations of the 2014 Lancet paper to present problems and potential solutions in reducing research waste and to launch the REWARD campaign.

The conclusion of the conference was that a lot is

of values in psychological research. On the level of policy making, the Erasmus MC policy in Research Integrity is discussed as well as the conference book on Integrity in the Global Arena. Furthermore you can read news about websites, like Comprehensive, but most of all the NRIN website that strives to become your anchor in looking at new developments in Research Integrity.

Enough to excite your curiosity in the field of Research Integrity, the corner stone for the future of scientific research and public trust in science. Educating students in ethics, attitudes and superior to uphold Research Integrity, to avoid scientific waste and to promote science and profound understanding of the world around us. For a long time virtues like honesty, modesty in claims, trust and integrity have not been considered of vital importance in pursuing the goals of science. Or in acquiring grants or making enough articles. The evolution of Research Integrity make us aware of the fact that students are first of all humans that have to be nurtured, argued calmly in the advance of discovering new knowledge.

Foreword – by Evert van Leeuwen

It is a pleasure to welcome you to this issue of the NRIN Newsletter. Reading will give you insight in the latest developments in Research Integrity from a number of perspectives. You will find an overview of the symposium on Education in Research Integrity, held on February 4th in the Royal Dutch Academy of Science, you will also read a report of the Metrics Conference in Stanford, November 2015. This report is written by Jelte Wicherts who gave a presentation on the (mis)use

NRIN Event: Education on RI

On February 4th, the 1st NRIN event on Education on Research Integrity took place in the Trippenhuis in Amsterdam. The well-attended event started with presentations of the RI education program of three universities (RU Nijmegen, Wageningen UR, TU Eindhoven). The presenters introduced their course and asked the audience to think along with them about bottlenecks and dilemmas that they encounter. Although the course of the 'broce' unravels after while, some of their questions are the same: what is the best timing of the course? Is it possible for first-year PhD-students? And how to organize follow-up, also after the PhD?

These questions were also addressed in the three subsequent discussion groups. The participants of these sessions were asked to discuss one of the three selected themes and to formulate do's and don'ts to future RI education. The selected themes were 1) composing a reference curriculum, 2) designing a template for co-syllabi, and 3) RI education for all layers of academia. A summary of the results of the discussion groups is given below.

A summary of the event and the slides of the presentations are available online via www.nrn.nl/submitdocument-nrn-2016.

Welcome to

Advisory report

The Foresight Institute's advisory report on the Dutch Code of Conduct for Scientific Practice published in 2014.

Vacancy: Researcher

“Scientific conduct is essential for the integrity of research. It is also a key factor in shaping the research environment. Perceptions regarding the integrity of research can act as barriers to best editorial policies and across disciplinary fields.”

Application deadline: November 22nd, 2016.

In this presentation

- About the NRIN
- NRIN activities
- NRIN newsletter and website
- **Future plans**

Future plans

- Follow-up on previous activities
 - Confidential counsellors and RI committee chairs
 - Research conference (autumn 2017)
- New activities
 - Meeting for Research Ethics Committees
 - Meeting for RI committee secretaries
 - Seminar/discussion meeting on plagiarism scans

Future plans

- Continuous expansion of the website
 - Looking for volunteers to help
- Next newsletters
- Participation in the 5th WCRI
- More teaching activities
- More (small) research projects

Future plans: Integripedia

- Grant proposal submitted
- Wikipedia-like online knowledge base
 - For and by users
- Practical information on research misbehaviours
 - Do's and don'ts
 - Geographical and interdisciplinary differences
 - Relevance, prevalence, guidelines, determinants, interventions, casuistry, etc.
